

**Australian
BORDER FORCE**

CAN YOU BRING IT IN?

A guide to what you can and can't bring in to the country. When you're travelling overseas or importing items, you need to know that some items can't be brought back with you and for others you need to get permission.

BRING ON A PLANE

There are limits on how much powders, liquids, aerosols and gels you can carry onto an airplane. If in doubt, pack these items in your checked-in bags.

- [Domestic flights](#) (*#content-index-0*)
- [International flights](#) (*#content-index-1*)
- [Limits on powders, liquids, aerosols and gels](#) (*#content-index-2*)
- [Exemptions to the limits](#) (*#content-index-3*)

Domestic flights

If you are flying within Australia on a domestic flight, there are no restrictions on how much powders, liquids, aerosols and gels you can carry on board.

If you are travelling domestically, but departing from an international terminal, there are limits on powders, liquids, aerosols and gels. All aerosol containers must have a fitted cap, or locking device.

International flights

There are limits on the amount of liquids, aerosols, gels and certain powders you can carry on board international flights entering or leaving the country. These restrictions apply:

- when departing Australia
- when transiting through Australia from one country to another
- when travelling on the domestic leg of a flight departing from an Australian international terminal
- prior to boarding an inbound flight at its last point of departure before it reaches Australia
 - note that inbound flight restrictions may be applied at the boarding gate at the last point of departure.

[Ask a question](#)

These limits do not apply to your checked-in bags. You may put these items in your checked-in bags.

These restrictions are strictly applied. Security screening officers have the final say if there is any doubt about what items can be carried on board.

Limits on powders, liquids, aerosols and gels

Limits on powders

Powders are fine dry particles produced by the grinding, crushing, or disintegration of a solid substance, for example flour, sugar, ground coffee, spices, powdered milk, baby formula or cosmetics. Powders may also be as clumpy, grain, or compressed material forms. An inorganic powder is a powder not consisting of, or derived from, any living matter.

There is no limit on organic powders, such as food and powdered baby formula.

The total volume of inorganic powders must not exceed 350 millilitres or 350 grams per person. Containers are calculated in the total weight. Passengers cannot tip powders out to fall under the 350ml threshold as the restriction is calculated on the total volume the container could hold.

There are no restrictions on the number of containers of inorganic powders per person, provided the total volume of all the containers of inorganic powder is 350 millilitres or less.

At the screening point all powders in your carry-on baggage may need to be separately presented for screening. Unlike liquids, they do not need to be put in a re-sealable plastic bag.

Limits on liquids, aerosols and gels

A liquid is a substance that is liquid at room temperature.

An aerosol is a substance kept under pressure.

A gel is a jelly-like substance.

All liquids, aerosols and gel items must be in containers of 100 millilitres or 100 grams or less. Containers must fit into one transparent and re-sealable plastic bag, like a snap-lock bag. The four sides of the bag's sealed area must add up to no more than 80 centimetres (eg. 20 x 20cm or 15 x 25cm).

There is a limit of one bag per passenger. Carers may carry the bag for people in their care, like children, and therefore be carrying more than one bag.

You cannot take containers larger than 100 millilitres or 100 grams, even if they are partially filled. For example, a 200 gram toothpaste tube that is half-full is not allowed.

At the screening point all liquids, aerosols and gels in your carry-on baggage may need to be separately presented for screening.

Examples of powders

Inorganic powders (restrictions apply)	Organic powders (not restricted)
All powders must be separately presented for screening. The total volume of inorganic powders must not exceed 350 millilitres (volume), 350 grams (weight). The container is counted in the total volume/weight.	
• Salt • Salt scrub • Sand • Some talcum powders • Some powdered deodorant • Certain foot powders • Powdered detergent and cleaning products	• Powdered baby formula • Powdered food • Coffee • Protein powder • Flour, spices, sugar • Most cosmetics • Epsom salt

Some items may not be obvious, such as snow domes or toys and souvenirs with sand or granular material inside. If you are unsure if an item will pass screening, pack it in your checked baggage.

Examples of liquids, aerosols and gels

Liquids	Aerosols	Gels
---------	----------	------

Liquid, aerosol or gel items must be in containers of 100 millilitres (volume), 100 grams (weight) or less. The container is counted in the total volume/weight.

• Perfume • Shampoo • Conditioner • Mouthwash • Oils • Vinegar • Sauces—e.g. salsa, gravy • Soups • Stews • Salad dressing • Soft drinks • Juice • Bottled water • Canned food with high liquid content (abalone, sardines, tuna) • Creams • Liquor—e.g. wine, beer	• Deodorant • Hairspray • Sunscreen spray • Shaving cream	• Lipgloss • Hairstyling gels • Jam • Yoghurt • Honey • Peanut butter • Cheese spread • Soft cheese—e.g. brie, camembert • Vegemite • Shaving gel • Toothpaste • Gel filled tablets—e.g. fish oil tablets
--	--	--

Some items may not be obvious, such as snow domes or toys with liquid inside. If you are unsure if an item will pass screening, pack it in your checked baggage.

Exemptions to the limits

You can take baby formula, prescription and non-prescription medicines (including special dietary products) and medical items on board if you need them during the flight. Please carry with you evidence about your medicines and medical items. This evidence may be a doctor's letter explaining why you need the medicine.

All organic powders are exempt. This includes most powdered foods, coffee, protein powder and baby formula.

Cremated human remains are also exempt.

For more information on what you can take on board flights leaving Australian international terminals see [what you can and can't bring](https://www.homeaffairs.gov.au/about-us/what-we-do/travelsecure/security-screening-at-airports/what-you-can-and-can%E2%80%99t-bring) (<https://www.homeaffairs.gov.au/about-us/what-we-do/travelsecure/security-screening-at-airports/what-you-can-and-can%E2%80%99t-bring>).
